

Sum $\sum_{i=1}^n a_i$

Sum over set elements $\sum_{w \in W} w \cdot f(w)$

Product $\prod_{i=1}^n a_i$

Product over set elements $\prod_{w \in W} (f(w) + 1)$

Exists with constraint $\exists n : W \rightarrow \mathbb{N}_0 : (\forall w \in W : n(w) \leq f(w)) \wedge \left(\sum_{w \in W} w \cdot n(w) = p \right)$
